

ABSTRACT

An electronic watch provided with a pager excellent from design and fashion standpoints and capable of displaying a call signal, a caller identifying signal, a message such as a telephone number, etc. can be provided.

On the basis of an output signal of the external inputting element 11, received and stored information signals are selected. Further, the time signal outputted by the time measuring circuit 15 and the received information signal outputted by the received information storing circuit 9 are selected by the analog display switching circuit 16 and the digital display switching circuit 17, respectively. The selected outputted signals are inputted to the analog display unit 26 and a digital display unit 20 to display the time information and the pager information, selectively.
